Although for a number of years a body with similar aims had existed under the exhaustive title of the 'Society for the Promotion of the Mechanical and Useful Arts in Scotland, for rewarding Inventions of Public Utility, and disseminating Useful Knowledge among the Industrious Classes of Society', it was not until 1821 that the then 'Society of Arts for Scotland' was formally instituted in Edinburgh. In an early petition to the Government for a grant, the principle aims of the new society were expressed as being, "... to stimulate and reward genius and mechanical industry, and to afford a ready and useful medium of intercourse among men of all ranks, who were engaged either in the pursuit of science or in the various practical departments of the arts and manufactures." All these activities are well represented in the records of the Society, held at the Library as Acc.4534 and Dep.230. The papers comprise two distinct yet related groups, giving in all quite a comprehensive account of the Society's history, and spanning more than a century of rapid scientific and technological achievement.

The two groups are 1. 'The General Series', and 2. 'The Lecture Series'.

1. **The General Series: [Acc.4534 only]**

This series consists mainly of correspondence and administrative material concerning the Society. Any material which could not be included under the more specific heading of the Lecture Series are, however, also included in this area. Legal documents, financial papers, the annual reports of the Prize Committee, printers, proofs of the published 'Transactions' and 'Proceedings' are among this last group. The chronological range of the series is from the early 1820's to the early 1900's, with material after 1900 sparse. The series, as a whole, is in good condition.

As the principal object of the preliminary sorting was to establish a straight chronological sequence, no detailed inventory was attempted. If the year of writing of a letter is known, however, then finding it in the appropriate year file would not prove too difficult.

Much of the earliest correspondence is concerned with the setting up and later management of the procedures of the internal government of the Society. There are also many letters concerning the then late Mr Keith of Ravelston, his bequest to the Society of a sum to be used as a prize fund led to the inauguration of the Keith Prize, the earliest prize to be given by the Society. Correspondents of possible literary or historical interest include Michael Faraday, P M Roget and Capt J Beaufort, all writing to thank the Society for Honorary Membership. There are also letters by and to the prominent Scots Sir David Brewster and Sir John Robison; both of these men playing an important part in the setting up and later administration of the Society.

Filing

The series is filed chronologically with one or more folders per year from 1819 to 1900. After 1900 the papers are filed in decades. Those papers which did not have a date were dated either by reference to their appearance in the 'Transactions', or were dated approximately. Some papers carry a slip explaining the source of their dating. Completely undateable documents are contained in a separate file. Most years between 1819 and 1900 have some correspondence, the greatest concentration occurring between 1829 and 1840. Those years with no material are 1858/60/64/76/77. Folders are endorsed with date and in a very few cases with information about contents.

2. The Lecture Series. General Description

The documents in this series fall into three main categories. These are:

- a. Communications sent to the Society between 1826 and 1901.
- b. The reports of the committees to which these communications were referred.
- c. Related Correspondence. Letters/drawings and diagrams [loose] sent with or about the communications.

Not all of the communications have a report on them, and it is evident that in some cases the relevant report has been removed from the series or lost. Similarly there are isolated cases of reports standing as single items with the original paper missing. It is perhaps also noteworthy that although every effort was made to ensure that as many as possible of those letters and ancillary papers with direct relations to a particular paper were included in the Lecture Series, there are letters in the General Series which could be regarded as Lecture Series material. It is difficult to give a precise indication of the number of documents in the Lecture Series, the original [19th cent.] catalogue reaching a figure of over four thousand in 1865; but the figure for communications alone would be in the region of three and a half thousand documents. In this connection it is important to note the gap in the series between nos.2009 and 3004 of the old numbering sequence.

Content

The range of subject matter covered in the series is wide, reflecting almost all of the technological and scientific preoccupations of the nineteenth century and ranging from the extremely simple invention to the highly complex mechanical innovation. It would be useless to attempt a detailed analysis of the material here, a chronologically arranged index is now available which goes some way towards serving that purpose. An author and subject index are also available.

Like most of the correspondence in the General Series, the papers of the Lecture Series have been well and consistently endorsed, probably by the Secretary of the Society. These generally give details of author, title and date of reading before the Society. Most of the title entries in the index are taken from these endorsements, although this is not a general rule.

In its stated intention to act for men of all classes the Society succeeded. The authors of the communications are as varied socially as are the papers with regard to content. One paper in the series is a paper on lighthouse lights by R L Stevenson, [no.4253 of the original catalogue], and other prominent contributors in the series include Sir David Brewster and Sir John Robison. Another regular contributor was a gardener working in Fife, many of his communications and inventions created considerable interest among the members of the Society.

The papers which were given favourable notice by the reporting committee were often printed either in full or in abbreviated form in the published 'Transactions' of the Society. A photocopy of the indexes of all eighteen volumes is available in a single binder and was extremely useful in finding the date/author of a particular paper.

Filing

The series is filed chronologically in the same manner as the General Series but, it has a lesser range, 1826 to 1901. Most years are well represented with a decline at the end of the 19th cent. Slips at the beginning of each subject index give a detailed explanation of its intended usage.

Dec 1979.

General Series

Mainly correspondence and administrative material, 1819-1946, n.d.

Notes on the Subject Index of the R.S.S.A Lecture Series (Acc.4534)

This index is intended to serve as a guide to the researcher who is interested in a specific subject represented in the collection. It is not an exhaustive listing, but it does cover most of those areas of scientific interest and invention with which the Society was primarily concerned.

Given the closely related nature of much of the material it was inevitable that some overlap among the various headings [Nos.1-31] would occur. In those ambiguous cases where no clear category emerged the papers have been listed under the two (or more) most appropriate headings. In the instances where the primary function of the design/invention includes secondary characteristics of another category no cross references have been given if it is obvious that the one encompasses the other. (eg A railway (steam) locomotive listed under no.22 would not also be listed under no.4).

In the cases where the subject matter did not fall under any of the available headings the papers have been listed under no.10. This is a blanket grouping and it is listed chronologically to allow a less difficult way of tracing a paper. A key word is provided in each case to facilitate this.

Within each category the papers have been listed by year, the papers within a given year being in most cases chronologically filed. `(C)'` before a specific paper denotes a holding of the Report of the paper only and `(R)'` serves the same function among some of the earlier papers. The headings are filed alphabetically and a wider index covering the `secondary` headings is available. (see p.3 of this inventory).

July 1980

Notation for the Subject Index of the R.S.S.A. (Acc.4534)

1. Architecture/Construction
2. Astronomy/Meteorology
3. Blind Alphabets/Education for the Blind
4. Boilers/Kilns/Firechambers
5. Carpentry/Woodwork
6. Drainage/Sewage/Plumbing
7. Electro Magnetic/Galvanic Discovery & Invention
8. Geography
9. Horology
10. Invention/Design/Theory Otherwise Unlisted
11. Locks/Latches/Bolts/Catches
12. Marine/Aquatic Design & Invention
13. Mathematics/Arithmetic/Statistics
14. Mechanics : a. Electrical / b. Mechanical (if known)
15. Medicine/Dentistry
16. Mines/Mining & Related
17. Music
18. Natural History
19. Optics (including Photography)
20. Printing & Related
21. Pumps & Related
22. Railways & Related
23. Scientific Instrument Design & Development
24. Science : Chemical
25. Science : Physical
26. Stoves/Ovens/Grates/Hearths
27. Textiles/Weaving/Fabrics
28. Theory & Speculation
29. Valves/Gauges/Meters/Governors/Burners (Gas)
30. Vehicular Invention/Theory & Design
31. Ventilation
